ACADEMIC QUALIFICATION

Bachelor of Technology (Computer Science and Engineering), Lovely Professional University (LPU), Jalandhar, 2021, CGPA: 6.21/10

WORK EXPERIENCE

Associate Software Engineer, Dotnet developer, Ideya Labs, Hyderabad (Apr 2022-Present)

Project/Role: Service genie project/associate developer

Objective: Logistics and Warehouse Management

Description: Built a web application using the Dotnet framework for a logistics and warehouse project. The system supports users in any computation kinds they might attempt. The administrator would find it simple to save the data and can also categorize it as necessary. The system allows adding product names, customer information, phone numbers, date of order, delivery information, a payment module, and other essential details. DBMS was used to encrypt the data, allowing for simple searches.

Project/role: XPRESS credit/support

Objective: Car Credit Solutions

Description: Supported the XPRESS credit car loan credit company's website application—the Dotnet framework-based project. Worked alongside the US Team in that company and made adjustments to the UI and backend to meet the client's requirements. Interacted digitally with new individuals through this project.

RESEARCH PROJECTS

Title: Automatic traffic punishing signal using IOT.

Location: Lovely Professional University, Jalandhar.

Duration: Jan-May 2021

Team Size: 6

Brief Description: The project's primary goal is to reduce noise pollution at traffic signals. It will add a new system to the road traffic intersection and help control existing systems. Along with increasing noise pollution, population growth and industrialization unbalance nature's biodiversity. The issue is making noise where it is utterly unnecessary to do so. The development of a new system entirely powered by the Arduino Uno was necessary to reduce these annoying horn noises. This configuration will guarantee that any noises caused by vehicles at a traffic light are eliminated.

Individual Role:

Created and lead the team for final capstone project for the Internet of Things utilizing Arduino and C++ programming to start an autonomous traffic-penalizing signal

TECHNICAL SKILLS

- Programming: C#, C++, Java, Object Oriented Programming
- Frameworks: ASP.net, ADO.net, .net MVC
- Database: SQL server
- Others: HTML, CSS, Java script, Operating systems, Data structures, Project management, Microsoft Office, IoT (Internet of Things)

AWARDS AND ACHIEVEMENTS

- Secured the first prize in the inter-university debate competition, LPU, Apr 2019
- Served as the placement coordinator, LPU, Sep 2018

CERTIFICATIONS

- Pursued digital marketing training, Internshala, July 2020
- Pursued the certification on Information Security and Computer Security incidents and the ways to recover and investigate a computer security scenario, Internshala, Nov 2019
- Completed training in C and C++, Internshala, May 2019

CO-CURRICULAR ACTIVITIES

- Completed a workshop on Full stack Dotnet course by Kanna babu, Satya technologies, Dec 2021
- Attended the 'Project management and Risk management' seminar by Dalwindar Singh principal architect, Lovely Infotech, Mar 2020

EXTRACURRICULAR ACTIVITIES

- Participated in 'One World' event organized by the cultural department of LPU, Mar 2020
- Worked as a coordinator in 'Vikriti' organization, LPU, Mar 2019
- Participated in 'Gyan Manthan,' LPU, Oct 2017

COMMUNITY SERVICE

- Conducted keep city clean drive in Jalandhar with the help of Vikriti organization LPU, Jan,2020.
- Served as a member of the Vikriti welfare group, which raised money and supplied food to meet the basic requirements of flood victims, march,2019.
